Project Experience

Static Personal Portfolio

Project Title: Personal Portfolio Website (Capstone)

Role: Zuitt Student (Front-end Developer)

Tech Stack: HTML, CSS, Bootstrap, JavaScript, Git GitHub

[Project Link](#)

- Developed a responsive portfolio website using HTML, CSS, Bootstrap, and basic JavaScript
- Applied mobile-first and responsive design principles
- Created structured layouts and basic interactive elements to improve user experience
- Deployed and hosted the website for public access
- Used Git and GitHub for version control and project management

Static Business Website

Project Title: Burac Crafts Website

Role: WordPress Web Developer

Tech Stack: WordPress, HTML, CSS, Web Hosting

[Project Link](#)

- Built and managed a business website using WordPress
- Customized theme layout and structured pages for product display
- Uploaded and organized product content for online presentation
- Maintained website hosting and ensured site availability
- Supported branding and online presence for a small crochet business

Academic Project (Group-Based System Development)

Project Title: IMPOUND-IT: Database-Driven Information System for Naga City Veterinary Office

Role: Project Leader / Lead Developer (Academic Project)

Tech Stack: Java, JavaFX, Scene Builder, SQL, MySQL, Git/Github

- Developed basic Java applications as part of coursework, applying object-oriented programming concepts
- Created and managed simple databases using SQL queries for data storage and retrieval
- Designed basic UI layouts using JavaFX Scene Builder for school projects
- Collaborated on assignments requiring debugging, documentation, and system analysis
- Applied basic debugging and problem-solving techniques in developing Java and SQL-based applications

Academic Project (Solo System Development)

Project Title: Consignment and Inventory Management System

Role: Full Stack Developer

Tech Stack: React, ShadCN UI, JavaScript, Express.js, Node.js, REST APIs

- Designed and developed a working prototype of a consignment and inventory management system as a solo project.
- Built the frontend using React and ShadCN UI to create responsive and user-friendly interfaces.
- Developed backend APIs and server-side logic using Express.js and JavaScript.
- Implemented inventory tracking, consignment management, and data handling features.
- Integrated frontend and backend components to deliver a functional full-stack application.
- Applied modern web development practices in UI design, state handling, and system architecture.
